the smart choice!

Water Permit Facts Water Management District Resources

A Water Use Permit allows withdrawal of a specified amount of water, either from the ground or from a lake or river.

A Water Use Permit is a state license to use the ground or surface water natural resources. Florida Statutes (Chapters 120 and 373) and Florida Administrative Code (Chapters 40D-1 and 40D-2) prescribe rules for applying for one. The applicant submits the application form, all required supplemental information forms, and all required documentation so that the District Water Use Regulation evaluation staff can determine if the use of water is reasonable and beneficial, does not impact an existing legal use, and is in the public interest.

Out of Time? Florida Water District Flowmeter Calibration Reports

Are you a property owner or manager in the one of Florida's five Water Management Districts?

If you hold a water-use permit you are required to have your **flow meter calibrated and certified** at regular intervals. Check your permit or contact the issuing

Water Management District to find out your due dates.

Hoover can help you meet any deadlines as a supplier of flow meter calibration and certification report services.

Calibrating and certifying your flow meter takes less than a day to perform. Hoover prepares the certification report and sends it to you upon completion of the service call. You then submit the certification report to the Water Management District.

Depending on the travel involved and the size of the flowmeter, the cost for this service ranges from \$400-\$600 per flow meter.
